Class 7 Computer Project

By E. Mendelsohn

On Monday, March 13 and Tuesday, March 14, students from Class 7 will take time out of their normal class schedule to build computers from scratch. This project, now in its second year, is headed by Chapin teachers Shana Negin, Neil Martinez and Cordenia Paige. Last year, students learned about the nuts and bolts of computers as they cooperated in small groups to complete the tasks of assembling the computer. Students used their Web coding skills to post hourly updates of their progress with photos, sounds and real time accounts of the two days.

If you would like to experience the build project, please visit [buildComputers/2005-06](#) to watch the project unfold. In addition, if there are comments you would like to share over those two days, please e-mail build@chapin.edu. Parents can visit the build project from 11:00 a.m. to 1:00 p.m. on Tuesday, March 14.
